5	Headquarter Location	U.K.
6	Company Profile	<p>The "Planets Water" atmospheric water generator generates fresh daily drinking water from the air increasingly known as the "water from air" or "air to water" miracle water machine. In a world where, according to the United Nations, the global consumption of water is doubling every twenty years, more than one billion people already either have very limited or absolutely no access to fresh drinking water. By the year 2025 the increased demand for fresh water is expected to exceed by 56% of the amount currently available. The Earth's most valuable commodity is becoming increasingly scarce. With "bottled water" being banned and outlawed from east to west as a result of increasing contamination of bottled water plastic the one hundred billion dollar a year totally unregulated bottled water industry is fighting for survival with consumer groups also raising numerous warnings about a host of different microorganisms and chemicals that have been found in bottled water. Tap water has also been held to blame for 41 million American citizens being supplied with water that was proved to be contaminated with pharmaceuticals. The Solution:</p>

		Through Planet's Water we provide the freshest, cleanest, and purest drinking water directly from the same air that we breathe.

2.11.2 Atmospheric Water Generator (AWG) Type and Applications

Table Atmospheric Water Generator (AWG) of Planets Water

Product	Description
below 100 Liters per Day	<p>AWG Residential Device</p>  <p>Our Residential AWG units range from 15, 30 up to 100ltrs per day. They require very little maintenance and are virtually a 'plug and operate' system that requires inexpensive filter changes every few months dependent on usage and climatic condition. Essentially the machines are a humidity and temperature driven device. The higher the humidity the higher amount of pure water generated. The minimum humidity should be 35 degrees but ideally any degree above 50 will be most suitable in order to produce optimum water levels.</p>

between 200 & 10,000
Liters per Day

Atmospheric Water Generators – can provide you with the solution to your water needs and in doing so will help reduce your ‘carbon footprint’ and achieve both an ecological & economical answer to the ever increasing water crisis; Our industrial machines are available in two models, our robust PlanetsWater™ ‘Big Blue’ units range from 200, 500, 1500, 3000, 5000 & 10000ltrs. The second being the newly introduced ‘compact’ commercial devices range 250, 500, 1000, 2000 & 5000ltr. These units offer savings in size, weight & price. We manufacture and distribute our AWG models worldwide, that offer the very latest technology being ‘state-of-the-art’ Atmospheric Water Generators that produce the purest, most natural drinking water available on the planet directly from humidity in the air we breathe.

1 Market Overview

1.1 Atmospheric Water Generator Introduction

As we know, 97% of the world's water is undrinkable salt water and more than half of the 3% that is freshwater, is inaccessible due to polar ice caps. Even though 70% of the earth is covered by water, more than 50% of the world population has insufficient drinking water. According to the World Bank, \$600 billion is invested in water delivery systems and the United Nations has announced a worldwide water shortage. Scientists have given warning of this and constructive steps are being taken, but current methods to achieve clean drinking water are expensive and wasteful. Facing the increasing fierce water crisis, atmospheric water generators come into sight. Atmospheric water generators are devices that extract water from humid ambient air by using a condensing surface and a unique and proprietary filtration system that removes dust, airborne particles and bacteria to generate clean drinking water. Water vapor in the air is condensed by cooling the air below its dew point, exposing the air to desiccants, or pressurizing the air. Unlike a dehumidifier, an atmospheric water generator is designed to render the water potable. Atmospheric water generators are useful where pure drinking water is difficult or impossible to obtain, because there is almost always a small amount of water in the air that can be extracted. In addition to atmospheric water production, the Appliance can also be used as a conventional water purifier by connecting it to an external municipal (city) water source.

13 Sales Channel, Distributors, Traders and Dealers

13.1 Sales Channel

There are two types of distribution channels: direct and indirect. As the names would imply, direct distribution is a direct sale between the manufacturer and the consumer, and indirect distribution is when a manufacturer utilizes a wholesaler or retailer to sell their products. There are pros and cons associated with either method and deciding the right choice for a business heavily depends on the trends and preferences of the consumers.

Figure Sales Channel: Direct Channel vs Indirect Channel

Source: Secondary Sources and Global Info Research, 2019

13.1.1 Direct Channel

A marketing channel that does not use intermediaries to distribute the product. Direct sales is selling directly to consumers away from a static commercial or physical location. In today's modern world of direct selling, deals can be closed via personal arrangements, in-person demos, and of course online direct sales.

A direct sales channel requires building and managing a sales team. The sales team needs to be

close to your target markets so if you plan to sell in multiple markets you will likely need local sales teams which may add an additional cost and management overhead.

Figure Direct Channel Pros & Cons

Pros	Cons
<ul style="list-style-type: none">• Full control of the sales process – you have the control to evolve your sales process and manage the pipeline without the interference of external parties.• Direct line of feedback – since you are selling directly to customers, you get a direct line of feedback about what they like or don't like in your product or service and you can iterate quickly.• No channel discounts – selling directly means that you don't have to share the revenues with a re-seller or channel partner.• Little or no dependency on external parties for revenue generation – you control the sales process, pricing and all the components of the sales process	<ul style="list-style-type: none">• High Cost – developing and managing a sales team is expensive. Just like any other group or division a sales team comes with a management and administrative overhead on top of the payroll, bonuses and other expenses.• Difficult to scale – scaling a sales team requires recruiting, training and on-boarding of new sales reps.• High barrier for entering new markets – entering a new market with a direct sales team means a new company, new office and everything that goes with it. It is a fairly expensive endeavor compared to entering a market through a network of local partners and re-sellers who have an established presence on the local market.

13.1.2 Indirect Channel

A marketing channel where intermediaries are used to help distribute the product. Re-sellers, distributors, value added providers and other types of channel partners can provide a wide reach for your business and get your product or service in front of many prospective buyers.

It is also a very cost-effective way to enter new markets as it spares you the costs of maintaining a local operation.

Figure Indirect Channel Pros & Cons

Pros	Cons
<ul style="list-style-type: none"> • Low sales, marketing and distribution cost – the channel partner usually has an established presence, is known and trusted by local customers and already advertises their brand and the value it offers. Riding on all that, you can reach new customers at a very low initial cost and enter new regions and markets in a cost-effective way. • Effective scaling – if you have an established channel model with the respective revenue sharing, co-marketing, incentives and other plans, you can scale very effectively by adding more channel partners into that mix. One partner manager can manage multiple partnerships and that in effect will bring in revenue that would require an entire in-house sales team. • Low cost for expanding into new markets – a network of local partners can help you establish a presence in a new region or market with a fairly low initial investment. You don't need to incorporate and manage new companies, advertise locally, hire people in remote locations or manage new offices. 	<ul style="list-style-type: none"> • Less control over the sales process – selling through partners means that there's an intermediary between you and the client. Depending on the model, your organization may not even be part of the sales process so you have little or no ability to influence the outcome of sales opportunities. • Less predictable revenues – partners won't always share their full pipeline with you and even if they do it's hard to predict revenues when you have no control over the sales process. To a degree, this can be offset by a larger pool of partners that have a larger total pipeline. • Partner discounts – depending on the type of partners and the value they provide you will need to share between 20% and 50% of your revenues with the partner that makes the sale.
